

# Hello, Helia!

A(nother) new IPFS implementation in JavaScript

## IP Stewards Team

Maintainer

- js-ipfs
- js-libp2p
- Many supporting libraries

**Alex Potsides**

Protocol Labs

**What is it?**

- **Replacement for js-ipfs**
- **Smaller**
- **Faster**
- **More productive?**

**Helia**

- Big

- **Big**
  - **Big API**

- **Big**
  - **Big API**
  - **Big Bundle**

- **Bad connectivity**

- **Bad connectivity**
- **(Actually completely unrelated to js-ipfs)**

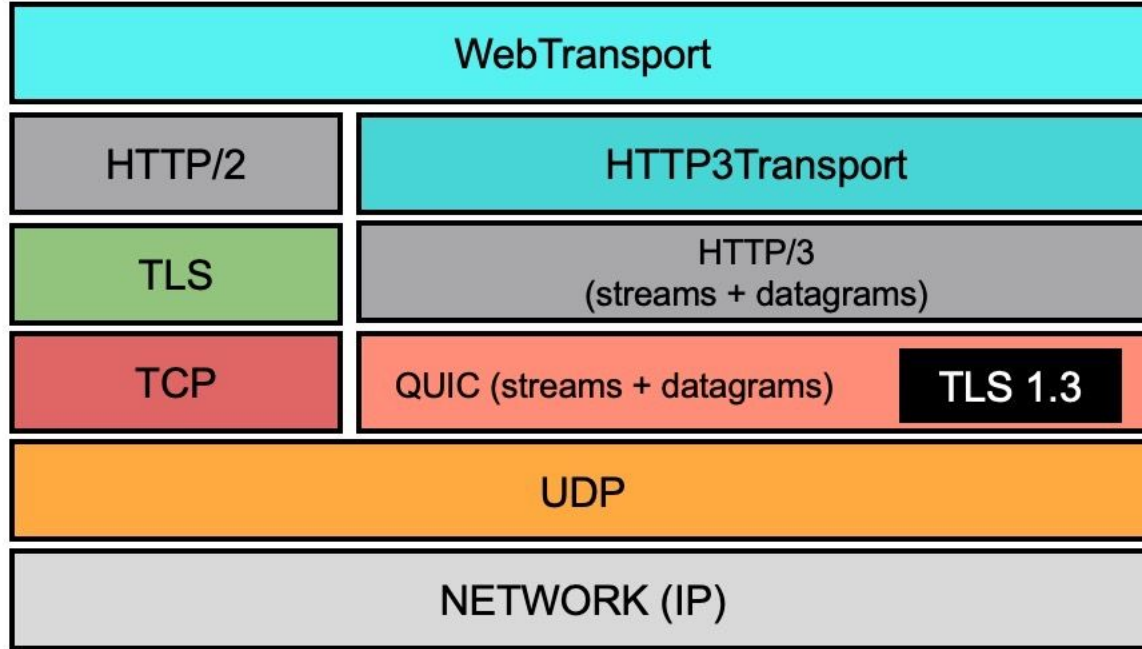

# Transports

	Go	Rust	JavaScript	Nim	C++	Swift	JVM	Python	Erlang
libp2p-tcp	Done	Done	Done	Done	Done	In Progress / Usable	Done	Prototype / Unstable	Done
libp2p-quic	Done	Prototype / Unstable	Missing	Missing	Missing	Missing	Missing	Missing	Missing
libp2p-websocket	Done	Done	Done	Done	Missing	In Progress / Usable	Done	Missing	Missing
libp2p-webtransport	Done	Missing	Prototype / Unstable	Missing	Missing	Missing	Missing	Missing	Missing
libp2p-webrtc-browser-to-server	Prototype / Unstable	In Progress / Usable	In Progress / Usable	Missing	Missing	Missing	Missing	Missing	Missing
libp2p-webrtc-star	Missing	Missing	Done	Missing	Missing	Missing	Missing	Missing	Missing
libp2p-webrtc-direct	Prototype / Unstable	Missing	Done	Missing	Missing	Missing	Missing	Missing	Missing

Done   In Progress / Usable   Prototype / Unstable   Unimplementable / Unsupported   Missing

Web  RTC

**Enough libp2p, back to Helia**

## Very simple API

- **Blockstore**
- **Datastore**
- **Pinning**
- **libp2p**

## Blockstore

- **put/get blocks by CID**
- **bitswap backed by local store**

## **Datastore**

- **put/get data keys**
- **IPNS names**
- **DHT provider records**
- **etc**

## **Pinning**

- **Garbage collection**

## Libp2p

- Pub/Sub
- DHT
- Protocol streams
- etc

- **Lightweight**
- **Favour composition**

**Demo**

# File Systems

**In the beginning there was UnixFS**

**Then UnixFS v1.5**

# Then UnixFS v1.5

Sort of?

**UnixFS v2?**

# UnixFS v2?

Don't ask

**Then??**

**Wouldn't it be nice to support  
multiple file systems?**

**Demo**

# Observability

**Logging?**

**DEBUG=\***

or

**localStorage.debug = '\*'**

```

```

**Progress events for everything**

**Demo**

**CID?**

**Helia**

**Helia**

**Helia**

**Helia**

**Demo**

**Phew!**

**Is it ready?**

- **Helia v1 has been released!**
- **Helia UnixFS v1 has been released!**
- **Helia IPNS v1 has been released!**

**Yes!**

## How to help?

- **Port your apps**
- **Convert examples**
- **Tell me your use cases & woes**

# Helia

**The end!**
